Scott® Pro Electronic Towel Dispenser (eHRT), Power Adapter

Works with KC Dispenser Codes: 29737, 29738, 29739, 31499, 34348, 34349, 34361, 34379, 35609, 34368, 34369, 35614, 31501, 43823, 31498, 49224, 51922

- **Adapter Code:** 51224
- **Works with extension:** 776047
- 6 VDC
- 2.0 Amps
- Right Angle
- 5.5mm O.D.
- 2.5mm I.D.
- 10mm long
- 6 foot cord

PLUGGING POWER ADAPTER INTO PLASTIC HOUSING

A Find hole in back housing on left side. **(Figure 1)**

B Pull adapter cord through hole. **(Figure 2)**

C Look for indentation in module to place cord. **(Figure 3)**

D Adapter Port **(Figure 4)**

E Adapter Plugged into Module **(Figure 5)**

OPERATION AND FEATURES

1. 2 sensor settings - high + low
2. 3 paper length settings
3. 2 mode settings - hung + hidden
4. Low battery
5. Low paper

INSTALLATION OF ROLL HOLDERS

Kimberly Clark Professional Contact Information And Other Instructions

Website: www.kcprofessional.com
Phone: 888-346-4652

These instructions are available on our website listed above.

- Our dispensers are designed to be durable and long-lasting. When they have reached the end of that life span, we encourage our customers to try to recycle them.
- We do not make a general claim that our dispensers are recyclable because, especially with the volatility in the recycling market, we can't ensure that the majority of our customers have access to recycling centers that would accept the dispensers. (This is following guidance made in the U.S. Federal Trade Commission's Green Guide).
- Instead, we recommend that you contact local recycling partners to see if they can accept them based on their components.
 - These plastic dispensers are primarily made of Acrylonitrile Butadiene Styrene, commonly known as ABS. It's a common thermoplastic used in everyday items like auto parts, household goods, and toys.
 - They also contain minor amounts of other materials including stainless steel and plated carbon steel.
- If no recycling facilities exist in your area that accept these, another alternative to landfill is to send them to an energy-from-waste facility. These facilities responsibly incinerate materials that cannot be recycled, capture the waste heat, and convert it to energy. Check availability in your area.
